

Graphs summary

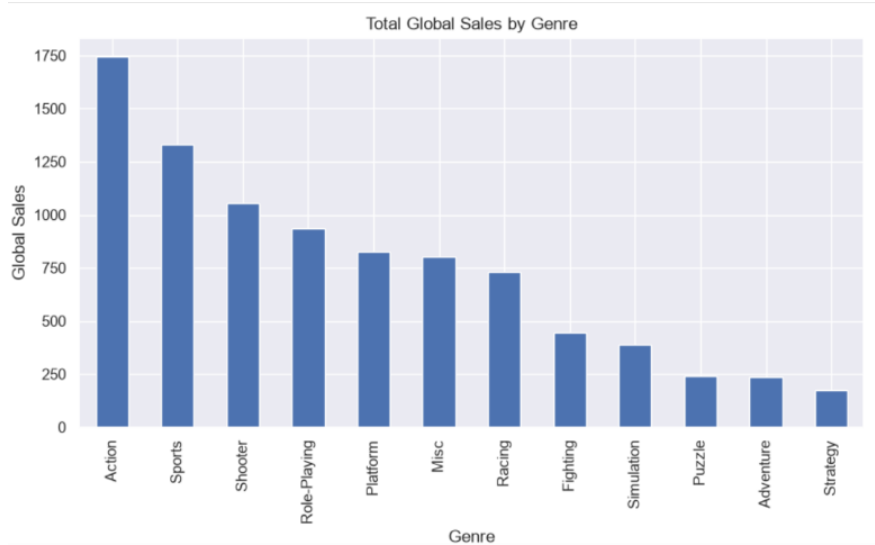

The graph shows how critic scores are distributed.

The distribution of critic scores is left-skewed, indicating that most reviews cluster around higher ratings while very few titles receive low scores.

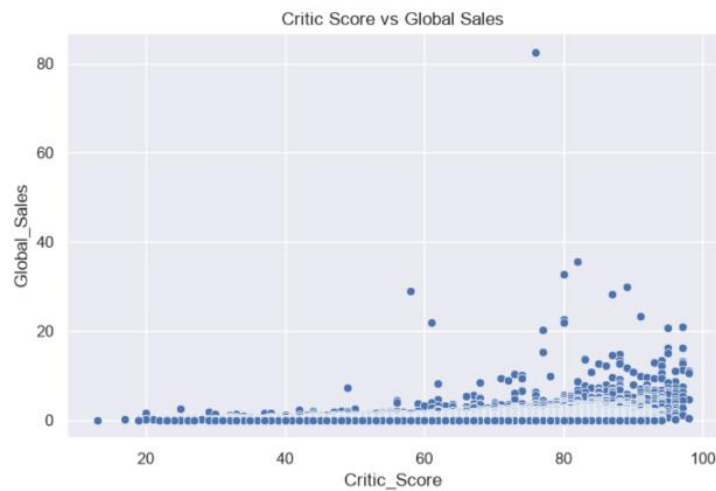

The graph shows which gaming consoles sold the most overall.

Most sales come from just 6 big consoles such as PS2 and Xbox 360, while dozens of older or less known systems sold very little.

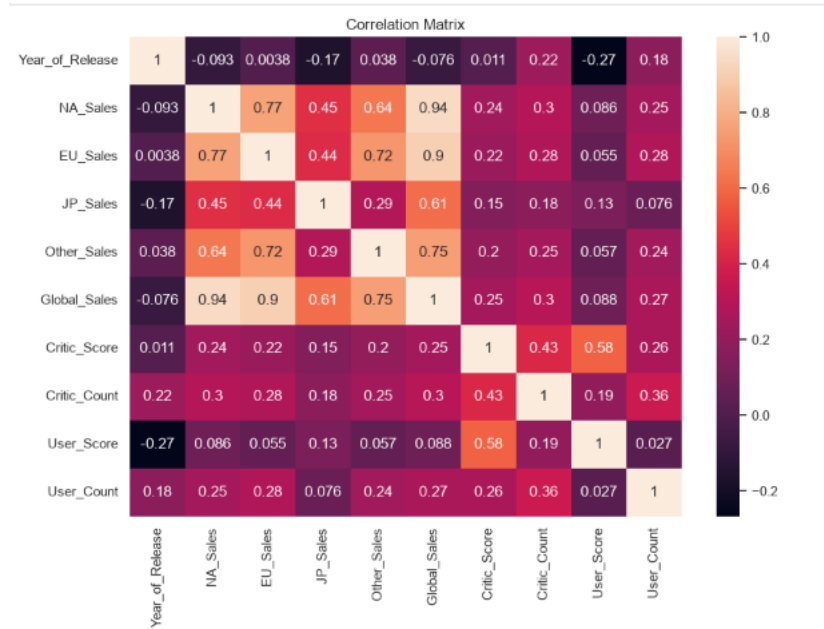

The graph shows which game genres sold the most overall.

Most sales come from top genres such as Action, Sports, and Shooter, while genres like Puzzle, Adventure, and Strategy sold very little.

The graph shows the relationship between critic scores and global sales.

Weak positive correlation = higher scores can mean better sales, but high scores don't guarantee success.

The graph shows how all numerical variables relate to each other.

Regional sales (NA, EU, Other) strongly correlate with Global_Sales (up to 0.94), while Critic_Score and User_Score have very weak correlations with sales (around 0.25 and 0.088).

The graph shows how total global sales changed over time.

Gaming sales grew steadily from the 1980s, peaked sharply around 2008–2009, and then rapidly declined in subsequent years.
